

## **History Of Caledonian Optical**

Caledonian Optical has over 40 years of lens manufacturing experience and is one of a select few independent laboratories that have harnessed the full capabilities of free form technology enabling them to manufacture a portfolio of the latest high definition digital prescription lenses.

Established in 1976 Caledonian Optical provides state of the art surfacing and glazing services to a range of Opticians throughout the UK and Ireland.

In 2015 the laboratory completed a major refurbishment with a second line of digital free form surfacing equipment added to allow for increased efficiency. They also invested in their own in-house AR coating facility to provide quicker turnaround times.

During 2015 they also introduced ARC - their most advanced varifocal to their portfolio. Since launching the new lens they have grown to become one of the largest ARC manufacturers in Europe.

Caledonian Optical was awarded a Made in Britain accreditation in 2016.
