A back surface freeform progressive with a 14mm corridor and minimum fitting height of 18mm. This is the Nikon introductory progressive lens and is available in both clear and Transitions.

## Free Form Plastic Vocational Lenses

### Nikon DigiLife

Nikon DigiLife is a progressive lens that has been primarily designed for improved close and intermediate work. This vocational progressive lens comes with a full distance area. The wide intermediate and reading zone is an improvement on standard progressive lenses for people that work for long periods at closer ranges of vision. It is available with 10, 12 and 14mm corridors with minimum fitting heights of 13, 15 and 17mm. Adds +0.50D to +4.00D.

### Nikon Home and Office Neo

Designed for close and intermediate work this freeform generated vocational progressive lens comes with a wide intermediate zone which enables continuous use up to a distance of several metres. The lens is available in Long, Standard and Wide with 15% of the Addition at pupil centre for Long, 25% for Standard and 40% for the Wide.

### Nikon Online Wide Neo

Nikon Online Wide Neo is a near to desk distance lens with extended focus for middle distance use. It is available with 4 degression powers 1.00D, 1.50D, 2.00D and 2.50D. The minimum fitting height is 15mm from the lower lid and is recommended with a frame depth of no less than 30mm. The lens can be customised with Viewfit.

## Free Form Low Addition Lenses
